

PIPE PROTECTION PRODUCTS

PROTECTING YOUR INFRASTRUCTURE SINCE 1995

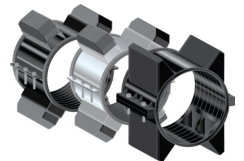

WRAPIDSEAL™ & JOINT SEAL™

WrapidSeal™ Manhole Encapsulation System is a wrap around heat shrinkable sheet that has been specifically designed for protection of buried and exposed manhole structures. WrapidSeal™ consists of a cross-linked, polyolefin backing, coated with an aggressive heat activated adhesive and has an impressive stretch-to-shrink ratio making it ideal for manhole chimneys. Joint Seal™ is a peel & stick tape designed for protecting concrete joints. Together, these products will keep your structures free from inflow & infiltration.

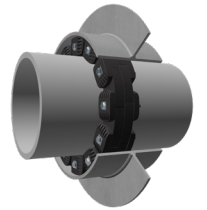

CASING SPACERS & END SEALS

If you are looking to improve performance, reliability and productivity, casing spacers may be just what you are looking for. Casing Spacers will save you time and labor - quickly installed by a single worker. Casing Spacers provide electrical insulation, will not rot or settle, support carrier pipe weight uniformly, protect against long term corrosion, require no casing filler and slide into place easily. Casing Spacers are available in the following material: Carbon Steel, Stainless Steel, or Polyethylene.

WRAP-IT LINK™ & WALL SLEEVES

CCI has your solution to all of your sealing needs when it comes to wall penetration. Wrap-It Link™ is a versatile sealing link system can be utilized to seal the annular space of carrier pipe and casing pipe applications as well as wall penetrations of piping system. Wrap-It Link™ have excellent electrical insulation properties and may be used for pressure application up to 20 psig. Our complete sealing system also includes Wall Sleeves with water stops. Working together, these products will provide you with the necessary seal for your piping system.

PIPE SUPPORTS

Utilizing ArmorCote™ U-Bolts & ArmorPad™ Pipe Supports, our pipe stands are built to accommodate multiple pipe sizes. Applications include industrial piping, oil & gas, and wastewater treatment plants. Offers ease of visual pipe coating inspection. Available with HDG, primer coated, or thermoplastic powder coated finish for corrosion resistance. Other pipe support options available include: flange and saddle supports. Custom designs are available upon request.

ARMORCOTE™ U-BOLTS

The ArmorCote™ U-Bolt coating has evolved from decades of proven technology. The cross-linked polyolefin material provides a coating with extremely high compressive strength and tremendous abrasion resistance. ArmorCote™ has a low co-efficient of friction that allows for movement without damage to the pipe coating. ArmorCote™ is a unique thermoplastic, UV stabilized to maintain the integrity of the product even under prolonged exposure to direct sunlight.
